

# QUINTUM TENOR HYBRID GATEWAY 60

www.highside-telecom.net  
info@highside-telecom.net

- Available with 1 to 2 T1/E1/PRI Spans
- Up to 60 VoIP channels
- Configurable for MultiPath or Gateway Applications
- Unified Communications Proxy
- Universal Dial Plan
- Microsoft Mediation Server Ready+
- Supports Remote Gateways
- Supported by Remote Management Tools\*
- Perfect for Deployments with Microsoft Office Communications Server 2007 and Exchange 2007

## The Robust VoIP Switching Solution For Microsoft Unified Communications

The new Tenor Hybrid Gateway supports a Microsoft Mediation Server with Quintum's award-winning Tenor VoIP Gateway. This single box solution simplifies VoIP deployments for Microsoft Unified Communications, and reduces the total cost of ownership.

The new UC Proxy enables 'any to any' connectivity of SIP and legacy telephony analog endpoints to the unified communications cloud, and supports branch office survivability for standard SIP endpoints.

### **More intelligence means greater flexibility**

With its MultiPath Call Routing, the Tenor can intelligently switch calls between the PBX, the PSTN, and Microsoft Office Communications Server 2007, allowing it to be adaptable to various configurations. The Tenor can also route calls over IP to reduce costs, and then transparently "hop off" to the PSTN, to reach off-net locations.

### **More intelligence means easier installation**

With its MultiPath architecture, the Tenor is the only VoIP solution that can be installed with minimum modification to the existing voice network. Tenor connects to the data network through a 10/100 Ethernet interface, and to the enterprise and public voice network through a T1, E1, or PRI interface. Tenors also have a customized Microsoft Configuration Wizard that steps you through the configuration process for all your Tenors, offering a simple and easy implementation.

### **More intelligence means lower total cost of ownership**

The Tenor Hybrid Gateway is integrated on an enterprise-class Intel (R) SR-1500 (1U) server with Intel Quad-Core Xeon processors. This single box solution contains a Tenor DXi VoIP gateway, and is ready for your Microsoft Unified Communications mediation server software to be installed.

### **More intelligence means 'any to any' connectivity**

The Tenor Hybrid Gateway 60 provides a unique Unified Communications (UC) Proxy that enables the Tenor gateway to access a full range of telephony endpoints to connect to the unified communications cloud. Tenor's UC Proxy also offers the ability to deploy multiple gateways off of one server, and to connect branch offices, IP PBXs, IP phones, and legacy VoIP equipment. The UC Proxy also recognizes fax calls and sends them directly to fax machines. Tenor integrates them all into the enterprise UC environment.

### **Field-proven reliability for integrated applications**

Based on field-proven Quintum technology, the Tenor Hybrid Gateway provides a powerful, reliable integrated solution to bridge the gap between Microsoft Office Communications Server 2007 and the legacy telephony world. The Tenor Hybrid Gateway continues Quintum's commitment to excellence in VoIP technology and customer support.

+Pre-loaded and configured with Windows 2003 Server

### **CALL MANAGEMENT FEATURES**

- Automatic call type detection: Voice/Modem/Fax
- Trunk group support
- User programmable dial plan support
- Pass-through support for calls to Toll Free, local and special service numbers (emergency services, etc.)
- Least Cost Routing with external Quintum VoIP Call Routing Server\*
- Answer and Disconnect Supervision
- Public and private dial plan support
- Forced routing
- Automatic appending/stripping digits dialed numbers
- Call Detail Records
- Caller ID Name and Number
